Education

Northeastern University — Boston, MA
Candidate for Master of Science in Computer Science — Expected December 2027
GPA: 3.83 | **Coursework:** Data Mining Techniques | Natural Language Processing

Northeastern University — Boston, MA
Bachelor of Science in Computer Science and Biology, Minor in Mathematics — April 2026
Honors: Manga Cum Laude | Dean's List | Dean's Scholarship
Coursework: Computational Methods in Bioinformatics | Computer Systems | Web Development | Database Design

Technical Skills

Languages: TypeScript | Python | Java | SQL (PostgreSQL, mySQL) | Go | R | JavaScript | LaTeX | C | SAS
Tools: Git | Docker | Terraform | AWS | Azure | VS Code | IntelliJ | Eclipse
Behavioral Skills: Teamwork | Problem-solving | Adaptability | Written Communication | Oral Communication

Experience

Northeastern University — September 2023–December 2024, September 2025–April 2026
Teaching Assistant for Algorithms and Data — Boston, MA
- Wrote solutions for homework assignments, assigned TA grading responsibilities, and gave students feedback on assignments and exams
- Facilitated 3+ hours of weekly recitations to help students understand class material
- Collaborated to develop homework and recitation problems in weekly instructor meetings

Verizon Communications x NExT — January 2025–July 2025
Software Engineering Co-op — Boston, MA
- As part of a university-backed consulting group, created an app that collects customer sentiment and network performance data to generate actionable insights regarding customer retention
- Used Terraform to build AWS infrastructure for daily collection and processing of data and app deployment
- Presented to Verizon stakeholders in bi-weekly touchpoints and wrote extensive completion report and documentation to communicate progress and facilitate app hand-off after completion

UMass Chan Medical School — June 2023–August 2023
Quantitative Methods Core Intern — Worcester, MA
- Analyzed datasets containing over 10 years data regarding drug data and clinical assessments
- Taught graduate students and faculty how to make graphs using SAS so work could be recreated for similar projects
- Created and presented graphs using SAS which summarized important statistics of the national Minimum Data Set (MDS) healthcare data
- Reported in weekly team meetings to update the PI and rest of the research group on project progress

Projects

Cairn | *Travel Webapp* — January 2025
- Wrote a scalable React app deployed using Azure Container Service and Docker Compose
- Built RESTful endpoints with Express and Bun, integrating APIs like TripAdvisor, Google Calendar, GeoDB, etc.

Loggr | *Simple Social Media App* — November 2023–December 2023
- Coordinated with 4 classmates to design a social media app using a MySQL database and python Flask REST API
- Used Docker containers to separate the client, server, and database tiers of the software

Image Processor | *Object-Oriented Design Project* — November 2022–December 2022
- Developed a GUI application using the Java Swing library to apply filters and transform images that also allowed the user to import, export, and convert between four image formats
- Structured program using principles of object-oriented design and the MVC model to allow for easier future extensions
